

**MEETINGS,
COLLABORATION
& MORE...**

In today's business environment, effective communication is crucial for success. A reliable and up-to-date AV system in your meeting room enhances collaboration, productivity, and fosters professionalism. It ensures that participants can clearly hear and see the content being presented, build trust with the audience, and enable remote participation. All of these factors contribute to a more efficient and effective meeting, ultimately leading to better outcomes and greater success for your business.

meeting rooms speak volumes

Manage meetings efficiently & with ease

Managing meetings efficiently and with ease has become a top priority in today's fast-paced work environment. With the help of meeting room management systems, screen sharing, and video conferencing, businesses can streamline the entire process, from scheduling and organizing to conducting and following up on meetings. These tools enable participants to access relevant information, collaborate on ideas, and make informed decisions, no matter where they are located. By incorporating these technologies, businesses can reduce costs, save time, and improve communication, ultimately leading to better outcomes and increased productivity.

Video conferencing has transformed the way people communicate, enabling businesses to remain connected and productive in a rapidly changing world.

It allows people to connect face-to-face in real-time, share ideas and files, and make informed decisions. With the ability to record meetings, businesses can review important details and keep a record of crucial discussions.

Microsoft provides various solutions for businesses needing video conferencing. Microsoft Teams, a collaboration platform with video call support for up to 10,000 participants, offers features like screen sharing, virtual backgrounds and live captions for seamless communication and collaboration. Businesses can also consider Skype for Business as an option; it enables video calls with up to 250 people and integrates with other Office apps. Both solutions are part of the Office suite and can easily be used by businesses familiar with Microsoft products. For larger conference rooms, Microsoft presents specialised hardware such as Surface Hub and Teams Rooms systems specifically tailored to conference rooms for professional-level video conferences.

Cisco provides a variety of video conferencing solutions for companies of all sizes. One of the most popular is Webex, a cloud-based platform that facilitates video meetings, webinars, and virtual events. Features such as screen sharing, whiteboarding, and real-time polling are included to improve collaboration and engagement. It can host up to 1,000 participants in one meeting, making it ideal for any size gathering.

Cisco also offers the TelePresence system for high-quality immersive video conferencing in conference rooms. This system has hardware such as cameras and microphones that creates a feeling of being together in

the same room, even when participants are thousands of miles apart. The maximum number of people it can support is 40, and it works with many different video conferencing platforms including Webex.

Cisco provides a selection of video conferencing hardware for various needs, such as the SX and MX Series for medium to large-sized meeting rooms and the Webex Desk Pro for personal use. All their products are crafted with user-friendliness and reliability in mind, joined by features like high-quality audio and video that guarantee crisp communication during conferences.

Zoom - the cloud-based video conferencing platform has become a leader in the market for businesses worldwide. It offers an excellent range of capabilities, such as high-quality audio and video, screen sharing, virtual backgrounds, and real-time collaboration tools that make working remotely easy and efficient.

Zoom's video conferencing offers businesses the ability to organize meetings, webinars, and virtual events with a maximal of 1,000 participants. Adding together, the platform provides various security features including end-to-end encryption and two-factor authentication so that meetings and data remain protected.

In addition to its video conferencing functions, Zoom has many more options to support collaboration and engagement: virtual whiteboards, breakout rooms and real-time polling, to name a few. The platform seamlessly integrates with Microsoft Teams and Salesforce among other business tools, providing an effortless way for companies to manage their workflows.

The Zoom Rooms system is specifically tailored for conference rooms, providing a professional yet simple experience in remote communication and team collaboration. All in all, Zoom ensures a dependable and user-friendly approach to video conferencing for businesses.
